## INTRODUCTION

The Indus Valley has been known to be the centre of one of the earliest civilization of the world, ever since the discovery of Harappa and Mohenjodaro in 1921–22. Hardly any site of the Indus (Harappa) civilization was discovered within the present day Indian territory at the time of independence and partition of the Indian subcontinent in 1947. The Archaeological Survey of India took up the task of exploring regions, east of Indus Valley for finding out Harappan sites. The renewed excavation resulted in the discovery of at least forty Harappan sites in Saurashtra (in Gujarat), the most important among them being Lothal. The word 'Lothal' in Gjarati formed by combining two words 'Loth' and 'Thal' (Sthal) means mound of dead. Interestingly, the word 'Mohenjodaro' in Sindhi carries the same meaning. Lothal lies between two ranns or salt waters, namely, Rann of Cambay on the south and the little Rann of Kutch on the north, with the Nal Lake in the centre. The ancient mound, in a flat featureless alluvial lowland was situated on the northern margin of the boundary line separating Saragwala village from Laxmipura and was coming under the revenue jurisdiction of Saragwala, administered by the Collectorate of Ahmedabad. The mound (22°31' N lat. and 72°14'25" E long.) rose gradually to a height of about 18 ft (7.02 m) from the surrounding field is situated 4 miles (6.4 km.) away from Lothal-Bhirkhui Station on Ahmedabad-Bhavnagar metre gauge Railway line. The site is located at a distance of about 52 miles (83.7 km.) from Ahmedabad (vide Map-inset). The mound of Lothal was ovoid with its longer axis (N-S) measuring 934 ft. (364.2 m.) and the shorter axis (E-W) was 749 ft. (292.1 m.) (Rao, 1979)

## HISTORY OF EXCAVATION AND TERMINOLOGY OF SITES

With a view to understand the cultural sequence of Lothal the first trench, SRG I was laid by the Archaeological Survey of India (ASI) in February 1955 in the highest part of the mound. Here 'SRG' denotes the village Saragwala. At a depth of about 2 ft. (0.78 m.) steatite seal bearing a single Indus sign was discovered, and in quick succession came more seals and objects. The primary object of ascertaining the cultural sequence was achieved after reaching a depth of about 21 ft. (8.19 m.) in the trench. Subsequently, the excavations were carried out on a single large scale. For this purpose the mound was divided into two main sectors, one to the north of SRG I and other to the south, the former being designated as SRG 2 and the latter SRG 3. Afterwards, in 1956, SRG 3 was extended further into several trenches to include a relatively isolated mound in the southeast corner (see Map) (Rao, 1979).

Many animal (and plant) remains along with objects of archaeological importance were recovered from these excavations. The animal remains were sent to the Zoological Survey of India (ZSI) for examination, and the systematic identification of which are documented below in the present account.

### AGE OF THE CIVILIZATION

In the early thirties and later part of the twentieth Century the chronology of the Harappan culture was based primarily on comparative archaeology. Relying upon the Carbon-14 dating Agrawal (1964) has suggested a maximum spread of 2200–1700 B.C. for the Harappan culture of Lothal.

### SYSTEMATIC ACCOUNT OF ANIMAL REMAINS FROM LOTHAL

Phylum MOLLUSCA  
 Class GASTROPODA  
 Order MESOGASTROPODA  
 Family VIVIPARIDAE  
 Genus *Belamya*

*Belamya bengalensis* (Lamarck) race  
*mandiensis* (Kobelt)

**Table 1 : Animal forms recovered from Lothal (Gujarat) excavations and their present state of distribution**

Group	Scientific name	Common name	Present natural distribution
Mollusca : Gastropoda	<i>Belamya bengalensis</i> (Lamarck)	Banded pond snail	Common throughout India and Myanmar
	<i>B. bengalensis</i> (Lamarck) race <i>mandiensis</i> (Kobelt)	Banded pond snail	Common in north western India from Allahabad to Punjab and west to Maharashtra
	<i>Telescopium telescopium</i> (Linn.)	Telescope shell	Coastal and estuarine west Bengal, Orissa, Andhra Pradesh, Tamil Nadu, Kerala, Malabar coast, Gujarat coast, Andaman & Nicobar Isl.; Sri Lanka; Myanmar; Indonesia; Madagascar
	<i>Turbinella pyrum</i> (Linn.)	Sacred chank	Kerala & Maharashtra coast
	<i>Pugilina</i> sp.	Whelk	—
	<i>Murex</i> sp.	Murex shell	East coast of India and Andaman Island
	<i>Oliva ispidula</i> Lamarck	Olive shell	Coastal Orissa, Andhra Pradesh, Tamil Nadu, Maharashtra; Philippines
	<i>Agaronia nebulosa</i> Lamarck	Olive shell	East and West coast of India; Sri Lanka; Indonesia; Islands in Indian Ocean
	<i>Conus lividus</i> Hwass	Conus shell	Andaman & Nicobar Islands, Kerala and Tamil Nadu in India; African coast; Malagasy; Gulf of Aden; Indonesia and Philippines
Pisces	sp. indet.	Telostean fish	—
Class : Osteichthyes	<i>Rita rita</i> (Ham. Bach.)	Rita fish	Most rivers of northern India; Nepal; Bangladesh; Myanmar; Afganistan; Pakistan; Indus plain and adjoining hilly areas
	sp. indet.	Cat fish	—
	sp. indet.	Carp fish	—
	<i>Serranus stoliczkae</i> Day	—	Red Sea to Pakistan and coast of Sind
Class : Chondrichthyes	sp. indet.	Saw fish	—

**Table 1 : Cont'd.**

Group	Scientific name	Common name	Present natural distribution
<b>Reptilia</b>	<i>Lissemys punctata</i> Lacépède	Mud or Flap-shell Turtle	Indo-Gangetic plain and eastward to Akyab in Myanmar
	<i>Chitra indica</i> (Gray)	Chitra Turtle	Indus-Gangetic river system; Thailand and Malaysia
	<i>Gavialis gangeticus</i> Gmelin	Gharial or long snouted Crocodile	Indus, Ganga, Brahmaputra and Mahanadi river systems in the Indian subcontinent and Irrawaddy and Arakan river systems in Myanmar
<b>Aves</b>	<i>Gallus</i> sp.	–	–
<b>Mammalia</b> Carnivora	<i>Canis familiaris</i> Linn.	Domestic Dog	Worldwide due to transshipment by human
	<i>C. aureus</i> Linn.	Asiatic Jackal	Southeastern Europe; south-western Asia; throughout India and Sri Lanka; some way into Myanmar and southeastern Thailand
	<i>Felis chaus</i> Güldenstaedt	Jungle Cat	Ranging from Africa through south-western Asia to India, all over the peninsula from the Himalayas to Kanyakumari; Sri Lanka; Myanmar
	<i>Melursus ursinus</i> (Shaw)	Sloth Bear	Forested tracts of India from base of Himalaya to South India, extended to Sri Lanka
	<i>Herpestes auropunctatus</i> Hodgson	Small Indian Mongoose	Northern India from Kashmir to Bengal, Orissa, Assam, eastwards into Myanmar and Malaya, westwards into Afghanistan, Baluchistan, Persia, Iraq and Greece
	<i>Herpestes</i> sp.	–	–
<b>Proboscidea</b>	<i>Elephas maximus</i> Linn.	Indian Elephant	Western Ghats from Karnataka southwards, Orissa, Bihar, western Himalaya, West Bengal and Assam in India; Sri Lanka; Myanmar; Thailand; Vietnam; Malay; Indonesia

Table 1 : Cont'd.

Group	Scientific name	Common name	Present natural distribution
Perissodactyla	<i>Equus caballus</i> Linn.	Domestic Horse	North eastern Persia; north western Afganistan; Russia and Turkestan
Artiodactyla	<i>Sus scrofa cristatus</i> Wagner	Indian Wild Boar	Whole of India; Sri Lanka; Iran; Iraq
	<i>Muntiacus muntjak</i> (Zimmerman)	Barking Deer	Distributed over the great part of Indo-Malayan Countries and extending into China, Formosa and Japan
	<i>Axis axis</i> Erxleben	Chital or Spotted Deer	Foothill forests of Himalaya, and throughout peninsular India, Sri Lanka and Nepal
	<i>Cervus unicolor</i> Kerr.	Sambar	Forests of India; Myanmar; Sri Lanka; Nepal; Sumatra; Borneo; Java; Malay
	<i>Cervus</i> sp.	—	"
	<i>Boselaphus tragocamelus</i> Pallas	Nilgai or Blue Bull	From base of Himalaya to Karnataka, eastern Punjab, Gujarat and Assam
	<i>Bos gaurus</i> H. Smith	Gaur or Indian Bison	Western Ghat, Southern Maharastra, Hill forests of Central and South eastern peninsula and West Bengal; eastward to Myanmar and Malay
	<i>Bos indicus</i> Linn.	Domestic Cow	Distributed worldwide through human agency
	<i>Bubalus bubalus</i> Linn.	Indian Buffalo	Jungles of the Nepal; Terai and plains of Brahamaputra valley in Assam, Orissa, Bastar district of Madhya Pradesh
	<i>Antelope cervicapra</i> Linn.	Black Buck or Indian Antelope	Plains of India; uncommon in forests and hilly tracts
<i>Gazella subgutturosa</i> Gldenstaedt	Persian Chinkara	Iraq; Iran; Jordan; Central Arabia; East Caucasus; Afganistan; Pakistan; Kazakstan; Turkmenistan; Uzbekistan; Mongolia; Western China	

**Table 1 : Cont'd.**

<b>Group</b>	<b>Scientific name</b>	<b>Common name</b>	<b>Present natural distribution</b>
Artiodactyla	<i>Capra hircus</i> Erleben	Domestic Goat	India; Baluchistan; Iraq; Iran; Asia minor
	<i>Ovis vignei</i> Blyth	Shapu or Urial	Gilgit, Astor and Ladak in Kashmir, eastward to northern Tibet, Punjab, Sind, Baluchistan and southern Persia
Lagomorpha	<i>Lepus nigricollis ruficaudatus</i> Geoffroy	Rufous-tailed Hare	From Himalaya southward to the Godavari river
Rodentia	<i>Hystrix indica</i> Kerr	Indian Porcupine	Himalaya to Kanyakumari, Sri Lanka; Westward to Persia; Baluchistan to Syria; Asia minor and Palestine
	<i>Rattus rattus</i> Linn.	House Rat	Original home was India and Myanmar; presently distributed worldwide through shipment of commodities

## DISCUSSION

Gujarat, including Saurashtra, has been known through ages as *Anarta*. The name derived from 'Anarta' mention of whom is available in *Rigveda* as a singer. It is considered that Gujarat was inhabited by man in the Upper and Middle Pleistocene periods as well as in the Holocene. Tools of the Early stone age, Middle stone age and Late stone age have been recovered from various parts of Gujarat, which suggest a Middle-Upper Palaeolithic element (Sankalia, 1962). Neolithic culture is not so far recorded in Gujarat. It is therefore, considered that the seminomadic folk using microliths and handmade or wheelmade pottery lived the land in ancient days. They lived the sand dunes and hill slopes prior to the advent of Harappans. Their main occupation seem to be hunting and fishing with some kind of food production. Besides these people, a Chalcolithic folk using micaceous red pottery, stone blade and flimsy coppery tools lived the coastal plains. The introduction of highly sophisticated Harappan civilization on the then prevailing society of microlithic and chalcolithic folks was an important event and which presumably had enormous impact on the indigenous people of this area.

Substantial evidences indicate that Lothal was a port town. The discovery of dock, stone anchors and marine molluscan shells prove connection of Lothal with the sea and anchorage of boats. The bed of a river of past days on the western margin of the mound was also evident. The discovery of Sumerian pottery and Persian Gulf seal have thrown light on the maritime trade links of the Harappans (Rao, 1979).

Animals with hard exoskeletons (molluscs, turtles) or endoskeletons (vertebrates) have been recovered from the excavations (vide Table 1). The presence of molluscan shells and turtles reveal that the area was well connected with the sea, at least in high tides. The coastal area was an estuary where lived crocodiles, turtles etc. The occurrence of saw fish supports this revelation. The Osteichthyes fishes recovered were brackish water to brackish-fresh water forms and were the foods of the ancient folks. One avian species is only found which too represent a wetland resident bird. Among the two turtles, *Chitra indica* still in these days is found in the Indus river system (apart from the Gangetic river system) and *Lissemys punctata* occurs in Indo-Gangetic plain. Presently, a radial pattern of drainage has developed in Kathiawar streams flowing in different directions from the central highland. It is presumed that the highland had substantive vegetation cover and the drainages had increased flow due to higher precipitation. The river system of Kathiawar peninsula, with all probability, was well connected with the river system of the peninsular plateau and Indo-Gangetic plain. Many riverine animals which in these days are not naturally occurring in western part of India had a wider distribution in past. The occurrence of turtles and long-snouted Gharial in western India support these presumptions. Increased anthropogenic pressure along the riverine systems of India had gradually influenced the vegetative and climatic features and distribution pattern of many animals. Among mammals, many of the species had natural distribution

in this part of western India. But *Equus caballus*, *Elephas maximus* and *Canis familiaris* were definitely not the indigenous forms and were transhifted from other places for human use. While *Equus* and *Canis* were presumably brought from the Central Asia, *Elephas* was most probably introduced from somewhere of west coast of India. Gazelles were essentially animals of open plains and grasslands and remained vulnerable to human persecution. The existing Indian form (*Gazella bennetti*) was not found among the available animal remains, but an exogenous form (*Gazella subgutturosa*) was traced. Perhaps this too was used as live-stock. Nath (1961) while dealing with the animals of prehistoric India and their affinities with the western Asiatic countries could not take into consideration the animal forms recovered from the Lothal archaeological site.

It is presumed that Lothal was not a cultural vacuum before the arrival of the Harappans. It was a small settlement on a river bank, occupied by an autochthonous folk using a ceramic ware. Harappans had some sort of trade link with Lothal before they settled down. The main products of exchange were cotton and cotton products, gem stones, ivory, metals etc. Further, easy access to the rich agricultural products, which had a great demand in the west, was a great point of attraction of the Harappans. Presumably, the Harappans were received cordially by the aboriginal people and their early settlements were unopposed. Gradually the local people became inclined to their ceramic wares, lithic tools and metal equipments. The full control of the situation by the Harappans was achieved in successive phases.

The practice of burial was probably common in Lothal. The cemetery containing human skeletons was discovered as a result of excavations. It appears from the account of Sankalia (1974) that the bangles made up of molluscan shells were found among various grave goods. It is presumed from the skeletons of *Bos indicus*, sheep and some other animals from grave pits that the animals were sacrificed on the death of persons. There is occurrence of horse bones in the mature Harappan levels of Lothal (Rao, 1979). Obviously, the Harappans were familiar with the horse as early as 2200 B.C.

Eventually, it appears to us that Lothal had developed overseas trade with the west coast of India on one hand and the Mesopotamian centres through Baharin Islands on the other. The scarcity of metals in the alluvial plains of Sabarmati necessitated import of copper, tin etc. from outside. These might have come from southern Arabia, Persian highland etc. Many animals like, horses, dogs, elephants were brought from other places and were utilized for various purposes.

## SUMMARY

The Indus Valley civilization is one of the earliest civilizations of the world, the evidence of which was discovered in Harappa and Mohenjodaro (now in Pakistan) before the independence of India. With the effort of the Archaeological Survey of India for finding centres of Indus Valley civilization in the Indian territory at least forty sites were discovered in Gujarat State and the most

important among them is Lothal. Lothal is situated between the Rann of Cambay on the south and the little Rann of Kutch on the north. A lot of objects of archaeological significance and animal remains were recovered from the excavations which suggest an age of 2200–1700 B.C. for the civilization. The analysis of animal remains (4402 examples/fragments), comprising mostly hard exoskeletons of molluscs and turtles, and endoskeletons of vertebrates, revealed the presence of 9 species of Mollusca, 9 species of Pisces, 3 species of Reptilia, 1 species of Aves, and 24 species of Mammalia. The occurrence of various molluscs and aquatic vertebrates suggest that the place was well connected with the sea, while presence of many big mammals (non-indigenous) indicate their introduction from other parts of the country or parts of the continent. The animal remains along with various other objects are suggestive of overseas trade link of this place with the west coast of India as well as Central Asia, and cultural exchange between the indigenous inhabitants and exogenous Harappans.

### ACKNOWLEDGEMENTS

The authors are indebted to the Director, Zoological Survey of India (ZSI) for providing all necessary facilities for carrying out the study. The Director-General, Archaeological Survey of India (ASI) had placed the animal remains of the excavations from Lothal in the repository of the ZSI and permitted the authors to include one Map from a document of the ASI for the present account, which are gratefully acknowledged. Shri T. J. Baidya, Deputy Superintending Archaeologist, ASI, Kolkata provided the authors with relevant literature and discussed points concerning the study. Following experts of ZSI have given information about the current distribution of some taxa dealt with in this study: Shri S. K. Ray (Mollusca), Shri S. Barua (Mollusca) and Shri S. Kar (Pisces). They acknowledge their debt to Dr. S. Chakraborty, the reviewer of the paper who has gone through it to offer valuable suggestions and to point out many useful changes for its improvement.

## INDEX

Suprageneric taxa are indexed in CAPITALS; generic and subgeneric names in **bold face**, and specific names in *italics*.

<i>aegagrus</i>	120	<b>Cervus</b>	35
<b>Agaronia</b>	6	<i>chaus</i>	12
<b>Antilope</b>	117	CHELONIA	10
ANTILOPINAE	117, 119	CHONDRICHTHYES	9
ARTIODACTYLA	15, 35, 36, 37, 38, 109, 117, 119, 120, 136	<i>conus</i>	6
<i>aureus</i>	13	CROCODYLIA	11
<i>auropunctatus</i>	12	CYPRINIDAE	9
AVES	11	CYPRINIFORMES	9
<b>Axis</b>	33	ELEPHANTIDAE	14
<i>axis</i>	33	<b>Elephas</b>	14
BAGRIDAE	8	EQUIDAE	15
<b>Belamya</b>	3	<b>Equus</b>	15
<i>bengalensis</i>	3	<i>familiaris</i>	13
<b>Bos</b>	37, 38	FELIDAE	12
<b>Boselephus</b>	36	<b>Felis</b>	12
BOVIDAE	36, 37, 38, 109, 117, 119, 120, 136	<b>Gallus</b>	11
BOVINAE	36, 37, 109	GALLIFORMES	11
<i>bubalis</i>	109	<i>gangeticus</i>	11
<b>Bubalus</b>	109	GASTROPODA	3, 6
<b>Caballus</b>	15	<i>gaurus</i>	37
CANIDAE	13	GAVIALIDAE	11
<b>Canis</b>	13	<b>Gavialis</b>	11
<b>Capra</b>	120	<b>Gazella</b>	119
CAPRINAE	120, 136	<b>Herpestes</b>	12
CARNIVORA	12	HERPESTINAE	12
Carp fish	9	<i>hircus</i>	120
Cat fish	8	HYSTRICIDAE	154
<i>cervicapra</i>	117	<b>Hystrix</b>	154
CERVIDAE	33, 35	<i>indica</i>	154
CERVINAE	33, 35	<i>indicus</i>	38
		<i>ispidula</i>	6
		LAGOMORPHA	153

LEPORIDAE	153	PROBOSCIDAE	14
<b>Lepus</b>	153	<b>Pugilina</b>	5
<b>Lissemys</b>	10	<i>punctata</i>	10
<i>lividus</i>	6	RAJIFORMES	9
MAMMALIA	12, 13, 14, 15, 33, 35, 36, 37, 38, 109, 117, 119, 120, 136, 153, 154	<b>Rattus</b>	154
<i>mandiensis</i>	3	<i>rattus</i>	154
<i>maximus</i>	14	REPTILIA	10, 11
MELONGENIDAE	5	<b>Rita</b>	8
<b>Melursus</b>	13	<i>rita</i>	8
MESOGASTROPODA	3	RODENTIA	154
MOLLUSCA	3	<i>ruficaudatus</i>	153
MUNTIACINAE	33	Saw fish	9
<b>Muntiacus</b>	33	SCIAENIDAE	9
<i>muntzak</i>	33	<b>Serranus</b>	9
<b>Murex</b>	5	SILURIFORMES	8
MURIDAE	154	<i>subgutturosa</i>	119
<i>nebulosa</i>	6	SUIDAE	15
NEOGASTROPODA	4, 5, 6	<b>Sus</b>	15
<i>nigricollis</i>	153	Teleostean fish	7
<b>Oliva</b>	6	<b>Telescopium</b>	3
OLIVIDAE	6	<i>telescopium</i>	3
OSTEICHTHYES	7, 8, 9	<i>tragocamelus</i>	36
<i>ovis</i>	136	TRIONYCHIDAE	10
PERCIFORMES	9	<b>Turbinella</b>	4
PERISSODACTYLA	15	<i>unicolor</i>	35
PHASIANIDAE	11	URSIDAE	13
PISCES	7	<i>ursinus</i>	13
POTAMIDIDAE	3	VASIDAE	4
PRISTIDAE	9	<i>vignei</i>	136
		VIVERRIDAE	12
		VIVIPARIDAE	3
		VOLEMIDAE	5
