FAUNA OF INDIA CHECKLIST

AVES

Gopinathan Maheswaran^{1*} and Imran Alam²

Zoological Survey of India, New Alipore, Kolkata - 700053, Email: ¹gmaheswaran@yahoo.com; ²imranalam27@gmail.com, ORCID: Maheswaran (0000-0003-2496-9556); Imran Alam (0000-0003-3577-966X). *Corresponding author: 1gmaheswaran@yahoo.com.

1. Introduction

Birds are fascinating animals that belong to the class Aves. They are known for their unique characteristics, such as feathered bodies, wings, and the ability to fly. However, not all birds can fly, as some species have evolved to adapt to different environments. Birds are found all over the world, in almost every type of habitat, from forests to deserts and even the ocean. With over 11000 species, birds come in all shapes and sizes, from the tiny bee hummingbird to the massive ostrich. Their diets vary widely, from herbivores that eat plants and seeds to carnivores that hunt prey such as insects, fish, and other animals. Many bird species are also known for their stunning plumage and songs, which they use for courtship and communication. Birds play an essential role in many ecosystems, such as pollinating flowers, dispersing seeds, and controlling insect populations. Studying birds can also provide insights into evolution, behaviour, and conservation efforts.

2. Global diversity

The global avian population comprises of 11,195 species (HBW and BirdLife International 2024), that are grouped into 36 orders and 247 families.

3. Diversity in India

India hosts a rich avifaunal diversity, with a total of 1,373 (see annexure I) bird species documented, representing 28 orders, 116 families, and 501 genera (excluding

subspecies). To provide a comprehensive account of the country's avian biodiversity, all known subspecies recorded in India have been included in the updated national checklist. This checklist was compiled through a synthesis of multiple data sources, including field observations by the authors, specimen records from the National Zoological Collection at the Zoological Survey of India, and authoritative references such as *Birds of India* (Majumder *et al.*, 2022), the online checklist by Maheswaran and Alam (2024), and *Checklist of the Birds of India* (Praveen and Jayapal, 2025). Subspecies data were incorporated based on *Birds of India: The New Synopsis* (2025) by Praveen. Additionally, distributional data for bird species, including endemic species, were sourced from the online platform eBird.

The state-wise distribution of bird species across India, along with the number of endemic species reported from each State and Union Territory, is detailed in Table 1.

We have added 15 new species to our existing avian checklist, the notable ones are Barnacle Goose *Branta leucopsis* (Bansal & Singh 2024), Laughing Gull *Leucophaeus atricilla* (Sreekanth 2024), Giant Shrike *Lanius giganteus* (Kapdi 2024), Tiger Shrike *Lanius tigrinus* Mukherjee (2024), Levant Sparrowhawk *Accipiter brevipes* (Eshaal *et al.* 2024) and Bianchi's Warbler *Phylloscopus valentini* (Urs 2024), African Openbill

Anastomus lamelligerus (Subin 2024), Pallas's Leaf Warbler *Phylloscopus proregulus* (Gyalpo

et al. 2023), Lapland Longspur *Calcarius lapponicus* (Mekola *et al.* 2023).

Table 1: Bird Species Diversity and Number of Endemic Species in Indian States and Union Territories.

Sl.No.	State/Union Territory	No. Species	No. Endemic Species
1	Andhra Pradesh	462	15
2	Arunachal Pradesh	733	1
3	Assam	700	1
4	Bihar	351	2

21	Rajasthan	483	13
22	Sikkim	530	0
23	Tamil Nadu	527	40
24	Telangana	439	10
25	Tripura	386	0
26	Uttar Pradesh	547	4
27	Uttarakhand	662	1
28	West Bengal	858	1
29	Andaman & Nicobar	346	26
30	Chandigarh	266	0
31	Dadra Nagar Haveli, Daman & Diu	231	5
32	Delhi	357	1
33	Jammu & Kashmir	538	0
34	Ladakh	399	0
35	Lakshadweep	115	0
36	Puducherry	256	1

4. Endemism

Among the bird species recorded in India, 79 (see table 4) are endemic, meaning they are found exclusively in this country and nowhere else in the world. The Western Ghats biogeographic zone holds the highest number of endemic bird species - 28 in total - making it a crucial region for avian endemism (see table - 1). Notable examples from this region include the Malabar Grey Hornbill *Ocyrceros griseus* and the White-bellied Blue Flycatcher *Cyornis pallidipes*. Following closely is the Andaman and Nicobar Islands, which also host a significant number of endemic species, such as the Andaman Woodpecker *Dryocopus hodgei* and the Nicobar Pigeon *Caloenas nicobarica*. These regions play a vital role in India's biodiversity conservation priorities due to their unique and irreplaceable avifauna.

5. Habitat

Birds can be found in various habitats, including forests, deserts, grasslands, wetlands, mountains, and water bodies. They have physical and behavioural adaptations that enable them to survive in their specific environment. Some birds migrate to breed, feed, or avoid harsh weather conditions while others are resident year-round. Their adaptations include specialized beaks, feet, and camouflage to suit their habitats.

6. Ecological Significance

Birds have important ecological significance as pollinators, seed dispersers, predators, prey, and providers of ecosystem services such as pest control, nutrient cycling, and scavenging. They also serve as indicators of environmental health and are a source of inspiration and enjoyment for people worldwide. As a result, birds have a significant impact on the planet's ecological and cultural diversity.

7. Human Significance:

Birds contribute significantly to global economies through their roles in the poultry industry, providing meat and eggs, and in ecotourism, particularly birdwatching, which generates substantial revenue worldwide. They are also vital in scientific research, advancing knowledge in areas such as disease transmission, genetics, and behavioural ecology. Beyond their economic contributions, birds hold profound human significance. Many species are kept as pets, offering companionship and emotional support, with emerging evidence highlighting their therapeutic benefits for mental health. Additionally, birds serve as critical indicators of environmental health, aiding in the monitoring of pollution levels, ecosystem changes, and disease outbreaks.

From a veterinary perspective, birds can act as hosts or vectors for zoonotic diseases, such as avian influenza, which pose risks to both avian and human populations. Consequently, proactive monitoring and management of bird populations are essential for safeguarding animal and public health.

In summary, birds provide substantial economic, human, and veterinary benefits. Their conservation and effective management are vital to sustaining these contributions and ensuring ecosystem and societal well-being.

8. Threatened species as per IUCN:

As per the IUCN Red List of Threatened Species (2025), India now has 20 Critically Endangered bird species (an increase of 2 from the previous list), 17 Endangered species (4 fewer than the last list), 60 Vulnerable species (a decrease of 5), and 88 Near Threatened species. Additionally, 1 species is listed as Data Deficient, 25 species are not recognized, and 1,162 species are classified under Least Concern. (See table 2 and Fig 1.)

Table 2: IUCN Threat Status of Indian Birds

Sl. No.	IUCN Threat Category	No. of Species 2023 (V 1.0)	No. of Species 2024 (V 2.0)
1	Critically Endangered	18	20
2	Endangered	21	17
3	Vulnerable	65	60
4	Near Threatened	88	88
5	Data Deficient	1	1

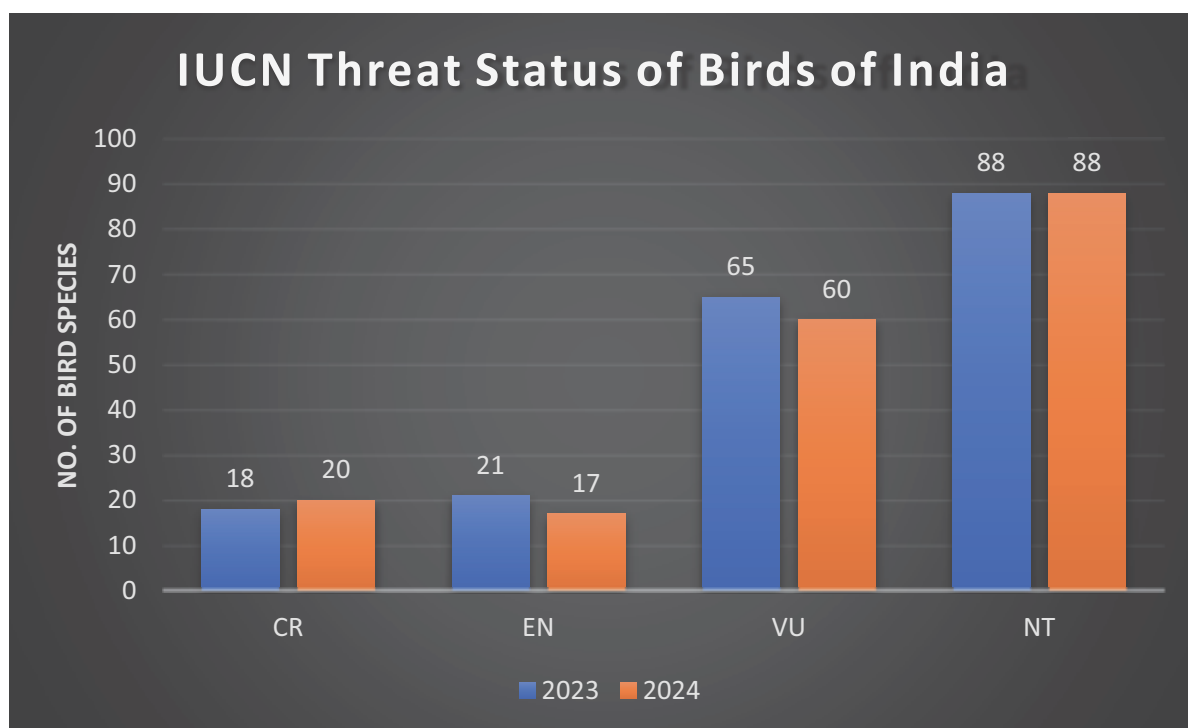

Fig. 1: Year-wise Comparative bar diagram of IUCN Threat status of Birds of India.

9. Protected Species as per WPA.

According to the recently published Indian Wildlife (Protection) Amendment Act of 2022 on December 19th 2022, a total of 205 species are now protected under Schedule I, while 1136 species are protected under Schedule II. The

different schedules and the species they protect are summarized in the table 3 below. These protections are vital for the conservation and management of India's rich biodiversity, ensuring the long-term survival of these species and their habitats.

Table 3: Status of Indian Birds as per Indian Wildlife (Protection) Amendment Act, 2022

Sl. No.	IWPA Schedule	No. of Species
1	Schedules I	205
2	Schedules II	1143
3	Not Protected	03
4	Not Accessed	22
	TOTAL	1373

10. Species under CITES:

According to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), 27 species are listed under Appendix I, which includes species threatened with extinction and that are or may be affected by trade, while 143 species are listed under Appendix II, which includes species that may become threatened with extinction unless trade is regulated. The listing of species under these appendices reflects the global concern for the conservation of biodiversity and the need for international cooperation in managing trade in wild animals and plants. CITES aims to ensure that international trade in wild species does not threaten their survival, while also allowing sustainable use for the benefit of local communities and the global environment.

11. Invasive alien species:

Non

12. Gap areas:

In the study of birds in India, there are several gap areas that need attention, including both taxonomic and geographic gap areas. Taxonomic gap areas refer to the lack of knowledge about specific bird groups or species.

For example, there are still many taxonomic uncertainties in the Indian subcontinent, and many species are still awaiting formal description or recognition. Taxonomic studies and research are essential to understanding the diversity of bird species in India fully.

Geographic gap areas refer to the lack of data or knowledge about certain geographic regions or habitats. There are several areas in India that remain understudied or underrepresented in bird research, such as the Northeast Himalayas and the Andaman and Nicobar Islands. These areas are important because they are home to several endemic species and have unique habitats that require conservation attention.

Addressing these gap areas is critical for better understanding the distribution and diversity of bird species in India. Identifying and studying these gap areas can help fill the knowledge gaps and provide a comprehensive understanding of the bird fauna in India. Such information is critical for conservation planning and management, as it helps identify areas that require conservation attention and enables us to take appropriate measures to ensure the survival of bird species in India.

Table 4: List of Endemic birds of India and their conservation status

Sl No	Order	Family	Species	Authority	IUCN RedList	WPA Schedule
1	Galliformes	Megapodiidae	Nicobar Megapode <i>Megapodius nicobariensis</i>	Blyth, 1846	Vulnerable	Schedule-I
